UNICEF, January 2022
Millions of children with disabilities around the globe continue to be left behind,

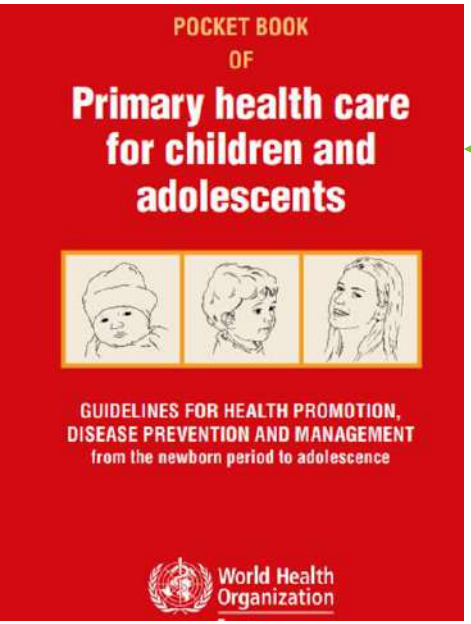
despite the near-universal ratification of the

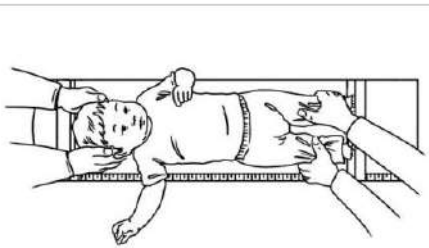
- **Convention on the Rights** of the Child, the call for action embedded in the
- **Convention on the Rights of Persons with Disabilities** and the clear mandate set by the
- **Sustainable Development Goals**.

Often, this neglect is the result of limited data

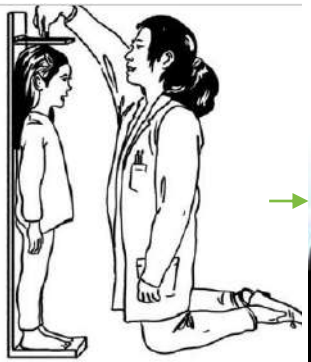
Universal Health Coverage, leave no child behind

World Health Organization

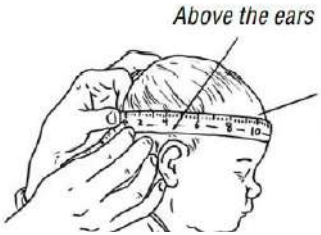




Length measurement from birth to 2 years of age

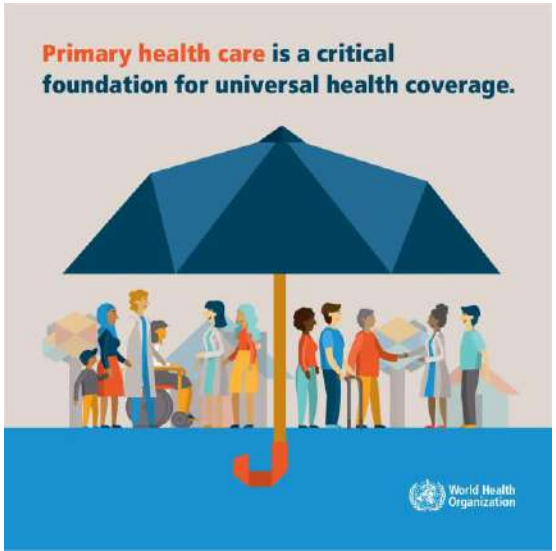


Height measurement in children from 2 years of age



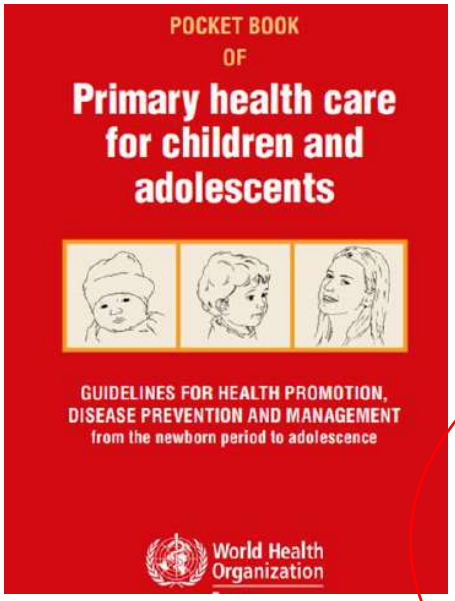
Above the ears

Broadest part of the forehead, midway between the eyebrows and hairline



https://www.who.int/europe/publications/i/item/9789289057622

World Health Organization



The health information system ensures the collection, analysis and use of data to ensure early, appropriate action to improve the care of every child

3.2 Well-child visit: birth – 72 hours

Most children will be seen in hospital for these visits; if not, they ought to be seen by the primary care provider within 24 hours of birth and again at 48–72 hours.

- Look for congenital diseases and jaundice
- Support caregivers.

History

- Problems during pregnancy, e.g. diabetes, medications, substance abuse, acute or chronic infections, mental or social stress, abnormal test results, e.g. positive group B Streptococcus, HIV, hepatitis B
- Mode of delivery and problems during or after birth
- Congenital disorders in the family, e.g. hip problems
- Hip dysplasia risk factors, e.g. twin pregnancy, breech position
- Problems passing meconium and urine

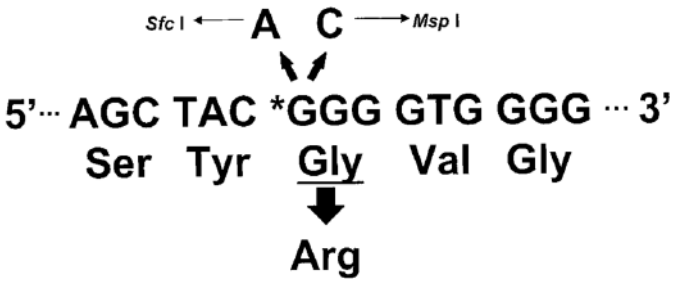
HL7 International

Key modelling question:
At what stage/when does a fetus stop being a body part of the pregnant woman and becomes an entity

Cases Achondroplasia *Primary Care 2021-2022*

4 weeks old girl presented: normal weight, reduced length , large head
What was observed during pregnancy and after birth?

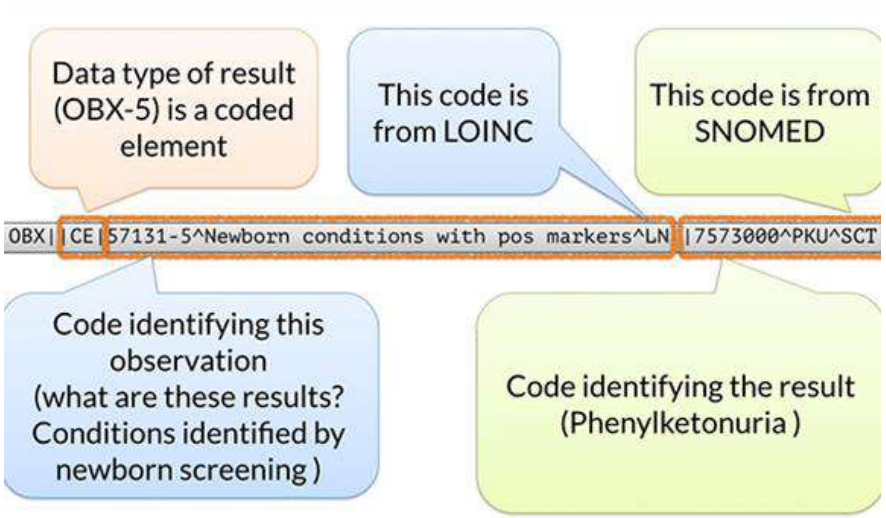
2,5 year old boy with achondroplasia: sign of autism
Does Autism occur more often in achondroplasia?



Common cause achondroplasia is
FGFR3 gene p.Gly380Arg mutation

Achondroplasia-growth curve at each primary care visit

Achondroplasia, prenatal ultrasound



SHORT FEMUR – Ultra sound
A 29-year-old female was transferred to our clinic because of short femurs (<2 percentile) on ultrasound scan.

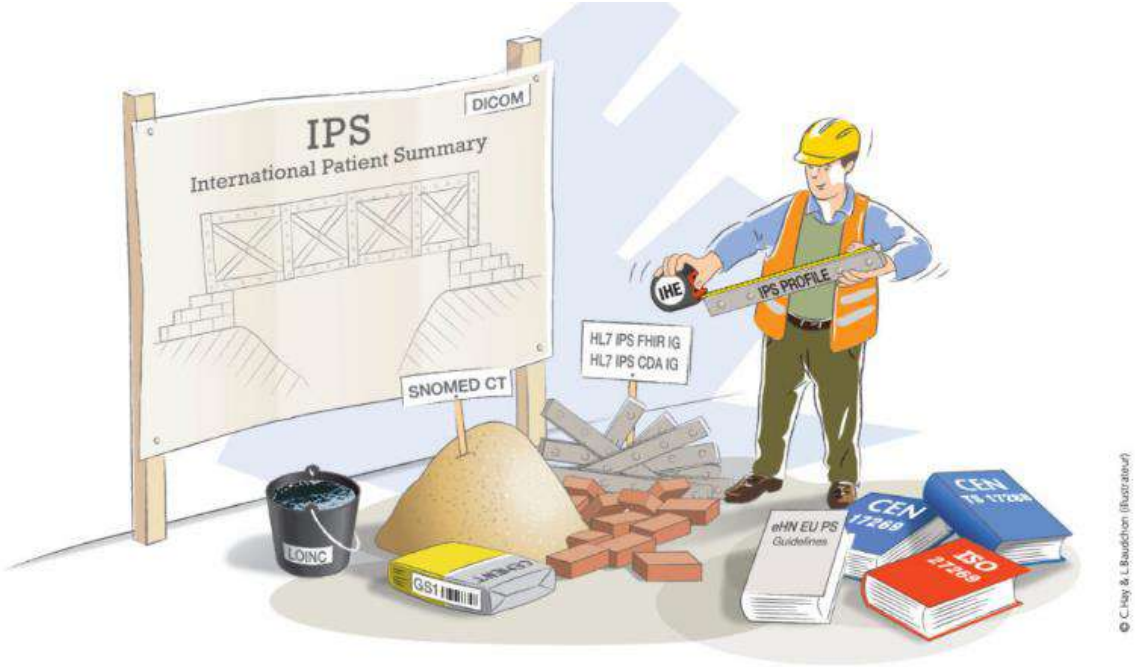
International Patient Summary



The International Patient Summary (IPS) is building the bridge between the “home” health and care environment of the patient and any other place where the patient needs to visit a clinical professional, whether within or across borders. The construction of the IPS involves a number o **standard** components and bespoke **specifications** to make it all work together.

IPS Datablocks for Rare Disease

(SK's suggestions, breadth)

Patient attributes	Allergies & intolerances	Problems incl. diagnosis	Medication summary	Immunization (incl. Vaccinations)	Results	Vital signs
Healthcare provider	History of procedures	History of past illness/ problems	History of Pregnancy	Medical Devices (incl implants)	Functional status	Social history (incl. life style factors)
Address-book	Advance directives (i.e., living wills)	Care plan				
Provenance			Alerts (incl. Risks)	Child-health	Family history	Genetic details
Cross-border (conditional)				Recent Encounters	Computable Clinical Guidelines	Patient Story

DigitalHealthEurope recommendations on the European Health Data Space

3 May 2022

Empower **individuals** to have control over their health data

Assist **policy makers and regulators** in accessing relevant non-identifiable health data

Enable **health professionals** to have access to relevant health data

Facilitate access to non-identifiable health data for **researchers and innovators**

Better diagnosis and treatment, improved patient safety, continuity of care and improved healthcare efficiency

Better health policy, greater opportunities for research and innovation
